

S.Farhad Hosseini

Age: 26

[GitHub](#) | [Google Scholar](#)

Location: Tehran

Military service: Done

Email: farhadhsn8@gmail.com | Mobile: +989335277126

TECHNICAL SKILLS

Skills	: Machine-learning, Deep-learning, Image and video coding methods, Data-structure and algorithms, Image and video processing, text processing, signal processing
Languages	: Python, C, C++, PHP
Frameworks and libraries	: Pytorch, Tensorflow (Keras), SK-learn, OpenCV, Numpy, Pandas, Matplotlib, Laravel, Yii2
Databases	: MySQL, MongoDB, Redis, google RTDB
Cloud	: GCP (cloud functions, storage, and RTDB)
Other tools	: linux, git, docker, rabbitMQ, Kafka

EXPERIENCE

AI Engineer

reportexx

Sep 2025 – Feb 2026

Remote work – Isfahan, Iran

- Developed an end-to-end machine learning pipeline to convert radiologists' abnormal voice reports into structured, standardized medical documents using NLP and speech-to-text processing.
- Built and deployed models to automatically detect imaging modality and protocol (MRI/CT, with contrast vs. without contrast) and identify the relevant anatomical organ from unstructured clinical narratives.

ML Engineer

memorybridge

Jul 2025 – Oct 2025

Remote work – Ottawa, Canada

- Designed and developed a provider-agnostic memory pipeline for AI chatbots to enable persistent, context-aware conversations independent of underlying LLM service providers.
- Built automated context-capture and memory classification systems (core, semantic, archival, etc.) to structure, store, and selectively retrieve conversation history for intelligent memory injection.

ML Engineer

maze

Apr 2025 – Jul 2025

Remote work – Tehran, Iran

- Led R&D efforts to develop an ML-based system for automated grading of handwritten Persian biology exams, combining OCR and NLP techniques to interpret free-text and structured answers.
- Built a benchmarking pipeline to evaluate and compare multiple models and approaches, establishing performance metrics and optimizing accuracy for Persian handwritten exam assessment.

AI Engineer

Sahaa

Sep 2024 – Jul 2025

Remote work – Tehran, Iran

- Developed and implemented a comprehensive fake news detection system for social networks.
- Designed a real-time updating model utilizing a knowledge base to enhance detection accuracy (Real of Fake news)
- Conducted deep fake detection for images and videos to identify manipulated content.

ML Engineer

Boolooz (under Golrang Ventures)

Nov 2024 – Apr 2025

Office work – Tehran, Iran

- Designed and implemented architecture and pipeline for Virtual Try-On (VTO) using RPC connections and RabbitMQ
- Background removal, Pose estimation, Human body parts segmentation, Cloth parts segmentation (for some of important segments like scarf), Generation of human models with new clothing
- Dress swapping between two humans
- Optimized and quantized deep-learning models for enhanced performance
- Dockerized services for streamlined deployment
- Enhanced semantic search capabilities through Persian sentence embedding techniques
- Implemented Persian query correction methodologies to improve search accuracy and user experience

AI Engineer

Drivee

Sep 2021 – Oct 2024
Remote/Office work – CA, USA

- Designed and implemented a pipeline to transform raw automotive footage into interactive 3D car models
- Developed various vision models, including background removal, frame selection, car stabilization, shadow generation, plate-number segmentation, window background removal, and image enhancement
- Collaborated on deploying AI models and developing a framework for processing 3D car model images using multiple AI models
- Developed a chatbot for car dealerships to handle test drive bookings and appointment scheduling using prompt engineering

Computer Vision Researcher

IVP-Lab (Image and Video Processing Lab) under the supervision of Dr. Azadeh Mansouri and Dr. Ahmad Mahmoudi Aznaveh

Mar 2022 – Sep 2024
Hybrid work – Tehran, Iran

- Contributed to the CLIC (Challenge on Learned Image Compression) and NTIRE (New Trends in Image Restoration and Enhancement) challenges
- Worked on developing and optimizing image compression methods to enhance visual quality while reducing bitrate

Teacher-assistant

Kharazmi-University

Oct 2022 – Dec 2025
Tehran, Iran

- Neural networks, Advanced programming, Video processing, Computer vision

PUBLICATIONS

No-Reference Image Quality Assessment Using Knowledge Distillation

- S. Farhad Hosseini-Benvidi, Azadeh Mansouri, and Ahmad Mahmoudi-Aznaveh iceecon-2026 (accepted)

NTIRE 2024 Quality Assessment of AI-Generated Content Challenge

- Liu, Xiaohong, Xiongkuo Min, Guangtao Zhai, Chunyi Li, Tengchuan Kou, Wei Sun, Haoning Wu et al. "NTIRE 2024 Quality Assessment of AI-Generated Content Challenge." In Proceedings of the IEEE/CVF Conference on Computer Vision and Pattern Recognition, pp. 6337-6362. 2024.

Compressed Image Quality Assessment Using Stacking

- Hosseini-Benvidi, S.F., Motamednia, H., Mansouri, A., Raei, M. and Mahmoudi-Aznaveh, A., 2024. Compressed image quality assessment using stacking. arXiv preprint arXiv:2402.00993.

The Effect of Variance-Based Patch Selection on No-Reference Image Quality Assessment

- Hosseini-Benvidi, S.F. and Mansouri, A., 2023, February. The Effect of Variance-Based Patch Selection on No-Reference Image Quality Assessment. In 2023 6th International Conference on Pattern Recognition and Image Analysis (IPRIA) (pp. 1-5). IEEE.

EDUCATION

Kharazmi University

Master's degree: Artificial Intelligence

Tehran, Iran
2021 – 2024

Bu-Ali Sina University

Bachelor's degree: Computer Engineering

Hamedan, Iran
2017 – 2021

LANGUAGES

Persian (native), English (Advanced), German (Basic)

HONORS

Challenge on Learned Image Compression 2024

Achieved second place in the CLIC-2024 in the Image Perceptual Model track

Jan-2024

International Conference on Pattern Recognition and Image Analysis 2023

Designated as a selected paper at IPRIA-2023

Feb-2023
